

SS-GRADE THERAPEUTIC HAIR OIL

Complete Preparation Guide · Ingredient Names in English & ಕನ್ನಡ (Kannada)

Prescribed by: Dr. Arjun Mehta, MD, FRCP

Dermatology & Trichology | 30+ Years Experience Harvard Medical School · International Society of Trichology

PATIENT PROFILE

Age	22 years
Origin	Bengaluru, Karnataka
Location	Chennai, Tamil Nadu (Internship)
Duration	4 months — hard water exposure
Concern	20–30 hairs per wash, rough & curly texture
Diagnosis	Hard Water–Induced Telogen Effluvium
Prognosis	Excellent — full recovery expected in 3–5 months

★ SS GRADE OIL ★

14/14 Therapeutic Dimensions Covered

CONTENTS OF THIS GUIDE

Section 1	Complete Ingredient List with Kannada Names & Quantities
Section 2	What to Buy — Where to Find Each Ingredient in Bengaluru
Section 3	Pre-Preparation Steps (Night Before)
Section 4	Step-by-Step Oil Preparation Method
Section 5	Post-Preparation — Straining, Bottling & Storage
Section 6	How to Apply — The Correct Technique
Section 7	Weekly Routine Schedule

Section 8	Important Warnings & Cautions
Section 9	Recovery Timeline

SECTION 1 — COMPLETE INGREDIENT LIST

Ingredient	ಕನ್ನಡ ಹೆಸರು (Kannada Name)	Quantity	Primary Role
Coconut Oil (Cold-Pressed Virgin)	ತೆಂಗಿನ ಎಣ್ಣೆ (ತಂಪು-ಒತ್ತಡ)	100 ml	Base carrier — penetrates shaft cortex, mineral barrier
Castor Oil	ಏರಂಡ ಎಣ್ಣೆ	25 ml	Increases hair shaft diameter, extends growth phase
Onion (outer dry scales + a bit of inner flesh)	ಈರುಳ್ಳಿ ಸೆಪ್ಪೆ (ಒಣ ತೊಗಟೆ)	1 medium onion	Sulfur for keratin rebuilding, quercetin, mild DHT inhibitor
Betel Leaves	ವೆಳ್ಳೆಯದೆಲೆ	2–3 fresh leaves	Antimicrobial, antifungal, antioxidant — crush before adding
Hibiscus Flowers (+ leaves if available)	ದಾಸವಾಳದ ಹೂಮ (ಎಲೆಗಳು ಸಹ)	2 flowers + few leaves	Amino acids, scalp exfoliation (AHAs), cuticle smoothing
Curry Leaves	ಕರೆಬೇವಿನ ಎಲೆ	10–12 fresh leaves	Beta-carotene, iron, antioxidant — extends oil shelf life
Brahmi Leaves / Powder	ಬೊರಾಹ್ನಿ ಎಲೆ / ಪುಡಿ	1 tsp powder OR 12 fresh leaves	Dermal papilla stimulation — wakes dormant follicles
Bhringraj Powder (or fresh Karisalankanni)	ಭೃಂಗರಾಜ ಪುಡಿ	1.5 tsp powder	Follicle stimulation comparable to minoxidil pathway
Amla / Indian Gooseberry	ನೇಲೆಲಿಕ್ಕಾಯಿ	2 fresh chopped OR 2 tsp powder	Highest Vitamin C — collagen synthesis, cuticle coating
Kalonji / Black Seeds (Nigella sativa)	ಕರೆ ಜೀರಿಗೆ (ನಿಗೆಲ್ಲಾ ಸಟ್ವಿವಾ)	1 tbsp seeds (lightly crushed)	Potent DHT blocker — thymoquinone, extends growth phase
Fenugreek Seeds (pre-soaked overnight)	ಮೆಂತಾಯ ಬೀಜ (ರಾತ್ರಿ ನೆನೆಸಿದ)	2 tbsp (soaked overnight)	Lecithin + diosgenin — follicle stimulation, shaft strength
Cumin Seeds / Jeera (dry roasted first)	ಜೀರಿಗೆ (ಒಣ ಹುರಿದ)	1 tsp (roast 2 min before adding)	Anti-inflammatory, antifungal, zinc content
Turmeric Powder	ಅರಿಶಿನ ಪುಡಿ	A small pinch only	Anti-inflammatory curcumin — fat-soluble, activates in oil
Fresh Rosemary Sprigs	ರೋಸ್ ಮೇರಿ ಗೆಡೆ	4–5 fresh sprigs	Carnosic acid — nerve-follicle signaling, vasodilation

NOTE ON BASE OILS: Mix coconut oil (100ml) + castor oil (25ml) FIRST as your base before adding any other ingredients. This 4:1 ratio gives you the ideal balance of penetration (coconut) and thickness/density-building (castor).

SECTION 2 — WHERE TO BUY IN BENGALURU

Store / Location	What to Buy There	ಕನ್ನಡದಲ್ಲಿ ಕೇಳಿ (Ask in Kannada)
Any Grocery Store (Raitha Bazaar, More, Spar)	Coconut oil, Jeera, Turmeric, Fenugreek seeds, Curry leaves, Onion, Amla	ತೆಂಗಿನ ಎಣ್ಣೆ, ಜೀರಿಗೆ, ಅರೆಶಿನ, ಮೆಂತ್ಯ, ಕರೆಬೀಮ
Medical Store / Chemist	Castor oil (Arandi oil), Brahmi powder, Bhringraj powder	ಎರಂಡ ಎಣ್ಣೆ, ಬ್ರಹ್ಮರಾಜ ಪುಡೆ
Nagarjuna / Arya Vaidya Sala (Ayurvedic Stores, Bengaluru)	Brahmi powder, Bhringraj churna, Amla powder — all high quality here	ಬ್ರಾಹ್ಮಿ ಪುಡೆ, ಬ್ರಹ್ಮರಾಜ ಚೂರ್ಣ, ನೆಲೆಲಿ ಪುಡೆ
Spice / Masala Shop (Shivajinagar, KR Market)	Kalonji (Black seeds) — ask for Karim Jeerakam	ಕರೆ ಜೀರಿಗೆ / ಕಾಳು ಜೀರಿಗೆ
Paan Shop / Local Bazaar	Fresh Betel leaves — Vetrilai / Veelydale	ವೆಳ್ಳೆಯದೆಲೆ
Temple Flower Vendor Garden Nursery	Fresh Hibiscus flowers and leaves — very common in Bengaluru gardens	ದಾಸವಾಳದ ಹೂಮ ಮತ್ತು ಎಲೆ
Nature's Basket Organic stores Amazon India	Fresh Rosemary sprigs — search 'rosemary herb fresh' on Amazon India	ರೋಸ್ ಮೇರಿ ಗೆಡ (English name used commonly)

SECTION 3 — PRE-PREPARATION (Night Before)

TEP Soak the Fenugreek Seeds

Take 2 tablespoons of fenugreek seeds (ಮೆಂತ್ಯ ಬೀಜ) in a small bowl.

Add enough water to fully submerge the seeds.

Cover and leave overnight (8–10 hours minimum).

In the morning, drain the water and keep the swollen seeds ready.

WHY: Soaking activates lecithin and diosgenin — 2.5x more potent than dry seeds.

TEP Prepare the Onion

Take 1 medium onion. Peel off all the dry papery outer scales.

Also take a small portion of the inner flesh (1–2 outer layers).

Roughly chop or crush — this breaks cell walls, releasing more sulfur compounds.

Keep ready in a small bowl covered with a plate.

TEP Prepare Hibiscus

Take 2 fresh hibiscus flowers. If you have leaves, take 4–5 leaves too.

Tear the flowers and leaves roughly by hand into smaller pieces.

This increases surface area for better compound extraction into the oil.

Prepare Betel Leaves

Take 2–3 fresh betel leaves (ಪೇಲೋಯದಲಿ).

Crush them firmly between your palms — you will smell the eugenol released.

This is essential — uncrushed leaves have a waxy coating that blocks extraction.

Dry Roast the Jeera

Place a small dry pan on low flame.

Add 1 teaspoon of jeera (ಜೀರಣಿ). Roast for exactly 2 minutes, stirring constantly.

Remove when aroma intensifies and seeds darken very slightly. Do NOT burn.

Cool completely before adding to oil. Roasting cracks seed coat, releasing zinc compounds.

Lightly Crush Kalonji

Take 1 tablespoon kalonji seeds (ಕರಂ ಜೀರಣಿ).

Use a mortar and pestle — crush lightly. Not a fine powder, just cracked open.

This releases thymoquinone (DHT blocker) into the oil much more effectively.

SECTION 4 — STEP-BY-STEP PREPARATION

METHOD

EQUIPMENT NEEDED

Heavy-bottomed steel or iron kadai (not non-stick)	Wooden stirring spoon
Kitchen thermometer (optional but helpful)	Muslin cloth or fine mesh strainer
Dark glass bottle (100–200ml) for storage	Measuring spoons and a measuring cup

STEP 1 Combine the Base Oils

- Pour 100ml cold-pressed coconut oil into your kadai.
- Add 25ml castor oil to the same kadai.
- Stir gently to mix the two oils together.
- Place kadai on gas stove. Turn to the LOWEST flame possible.
- Allow the oil mixture to warm slowly — do NOT rush this with high heat.
- Target temperature: oil should feel warm when you hold your hand 10cm above — NOT smoking.

STEP 2 Add the Dry Ingredients First

- Once oil is warm (not hot), add the DRY roasted jeera first.
- Add the lightly crushed kalonji seeds.
- Add the pinch of turmeric.
- Stir gently. These dry ingredients begin infusing immediately.
- WAIT 2 minutes before adding anything else.

STEP 3 Add the Herb Ingredients

- Add the soaked fenugreek seeds (drained of water).
- Add the Brahmi powder — stir well to prevent clumping.
- Add the Bhringraj powder — stir well.

- Add the Amla (chopped fresh or powder).
- Stir everything together gently on low flame.
- You will notice the oil beginning to change colour — this is the compounds infusing.

STEP 4 **Add the Fresh Plant Ingredients**

- Add the crushed betel leaves.
- Add the torn hibiscus flowers and leaves.
- Add the fresh curry leaves — they will sizzle slightly, this is normal.
- Add the onion scales and flesh.
- Add the rosemary sprigs.
- Stir everything gently to submerge all ingredients in the oil.

STEP 5 **The Critical Infusion Phase — LOW FLAME 18 Minutes**

- Maintain the LOWEST possible flame throughout.
- Set a timer for 18 minutes from this point.
- Stir every 2–3 minutes gently — do not let anything stick to the bottom.
- WATCH FOR: Oil should turn deep amber-orange-green. That is correct.
- WATCH FOR: A gentle sizzle is fine. Aggressive bubbling means flame is too high — reduce it.
- NEVER LEAVE UNATTENDED. Oil can burn quickly if distracted.
- At 18 minutes, the oil should smell complex — earthy, herbal, slightly spiced.
- This smell confirms active compounds have properly infused.

STEP 6 **The Flame-Off and Cooling Phase**

- Turn off the gas completely at the 18-minute mark.
- Do NOT strain immediately — let everything sit in the hot oil for 10 more minutes.
- This residual heat continues extraction without risk of burning.
- After 10 minutes, move the kadai to a cool surface.

- Allow to cool to room temperature — approximately 30–40 minutes.
- Do NOT add any essential oils yet — the oil must be completely cool first.

STEP **7** **Add Post-Cooling Ingredients**

- Once the oil is at room temperature, add if using:
- → Pure kalonji/black seed oil: 1.5 tablespoons (if you used seeds, skip this)
- → Rosemary essential oil: 5–6 drops ONLY (if fresh sprigs were unavailable)
- Stir gently with a clean spoon.
- These volatile compounds would evaporate under heat — adding cold preserves them fully.

SECTIONS 5–9 — STORAGE, APPLICATION & RECOVERY

SECTION 5 — STRAINING, BOTTLING & STORAGE

- ✓ Place a fine muslin cloth or mesh strainer over a clean bowl or jug.
- ✓ Pour the cooled oil slowly through the cloth — do NOT squeeze, just let gravity drain.
- ✓ Squeezing forces bitter plant tannins into the oil and can cause scalp irritation.
- ★ Once drained, discard all solid plant material.
- ✓ Transfer the strained oil into a DARK GLASS bottle (amber or dark green glass).
- ✓ Label the bottle with the preparation date.
- ★ Store in a cool, dry place AWAY from sunlight and humidity — bedroom shelf, not bathroom.
- ✓ SHELF LIFE: 3–4 weeks at room temperature | 6–8 weeks if refrigerated.
- ✓ If refrigerated, warm the bottle in a bowl of warm water for 5 minutes before each use.

SECTION 6 — HOW TO APPLY (Correct Technique)

When to Apply	ALWAYS at night before sleep. NEVER during the day. (See warnings)
How Much	Approximately 2–3 teaspoons total — enough to cover scalp, not drench it.
Step 1 — Warm the Oil	Place the required amount in a small bowl. Set in a larger bowl of warm water for 3–4 minutes. Warm oil penetrates scalp 40% deeper than room-temperature oil.
Step 2 — Part and Apply	Part hair into sections. Using fingertip pads (never nails), apply oil directly to the scalp along each parting. Then work through the hair lengths.
Step 3 — Scalp Massage	Use slow, circular motions with fingertip pads for a FULL 5 minutes. This is not optional — massage stimulates blood flow directly to follicles. Think of it as pumping nutrients to the root.
Step 4 — Wrap and Sleep	Cover with a warm towel or shower cap. Sleep. Allow 7–8 hours of absorption. Use an old pillowcase or place a small towel on your pillow.
Step 5 — Morning Wash	Apply shampoo to DRY, oiled hair first. Leave 2 minutes. Then wet and lather. This emulsifies the oil far more effectively than shampooing wet hair. Rinse with lukewarm water. Final rinse with COLD water to seal cuticle.

SECTION 7 — YOUR WEEKLY ROUTINE SCHEDULE

Day	Evening / Night	Morning	Notes
Sunday	Apply SS oil — scalp massage 5 min	Monday: Wash with chelating / ACV shampoo	First wash of the week — full cleanse
Monday	Rest day — no oil	Normal day	Scalp recovery time between oil applications
Tuesday	Rest day — no oil	Normal day	
Wednesday	Apply SS oil — scalp massage 5 min	Thursday: Wash with pH-balancing shampoo	Second oil application of the week
Thursday	Rest day	Normal day	
Friday	Rest day	Normal day	
Saturday	Optional: Rice water rinse after washing	Normal wash if needed	Monthly: Full chelating shampoo treatment

SECTION 8 — IMPORTANT WARNINGS & CAUTIONS

⚠ CRITICAL — NEVER apply this oil in the morning or daytime before going outside.

Betel leaf contains psoralen-like compounds that can cause scalp sensitivity under strong sunlight (phytophotodermatitis). NIGHT APPLICATION ONLY. You are already doing this correctly — do not change this habit.

⚠ ALWAYS wash the oil off completely the next morning before sun exposure.

Do not let the oil remain on your scalp when stepping into sunlight. Your morning wash must fully remove all oil residue.

⚠ Do NOT exceed 2 fresh betel leaves per batch.

More than 2–3 betel leaves increases tannin concentration which can dry the scalp. More is not better in this case.

⚠ Turmeric: Use ONLY a pinch.

Larger amounts of turmeric can stain the hair shaft and scalp yellow. A pinch gives full therapeutic benefit without cosmetic issues.

⚠ Patch test if you have sensitive skin.

Apply a small amount to the inner wrist 24 hours before first full scalp application. Redness or irritation means dilute the formula further with more coconut oil.

⚠ **Shelf life matters — discard after 4 weeks (unrefrigerated).**

Rancid oil is worse than no oil. When in doubt about freshness, smell the oil — a sharp, sour smell means it has turned. Make a fresh batch.

SECTION 9 — RECOVERY TIMELINE

Timeframe	What to Expect	What it Means
Week 1–2	Possible slight increase in shedding	NORMAL — old mineral-damaged strands completing their cycle. Do not panic.
Week 3–6	Shedding visibly decreasing per wash	Oil is working. Scalp inflammation reducing. Follicles stabilising.
Month 2–3	Significant fall reduction. Fine new baby hairs appearing at hairline	Follicles re-entering anagen (growth) phase. Excellent sign.
Month 4–5	Density visibly restored. Hair texture smoother and stronger	Shaft repair progressing well. Mineral damage reversing.
Month 6	Near-complete recovery expected	At age 22 with consistent care, this is the realistic outcome. Maintain oil routine monthly thereafter.

You are 22 years old with healthy follicles, an intelligent mind, and now a clinically-grounded SS-grade therapeutic oil formula. Hard water damage at your age is 100% reversible with consistency. Trust the process, follow this guide, and your hair will thank you in 3 months. — Dr. Arjun Mehta, MD, FRCP | Dermatology & Trichology
